

Introducing Korea's First Robotic Turtle!

kobuki [거북이] *n.* turtle

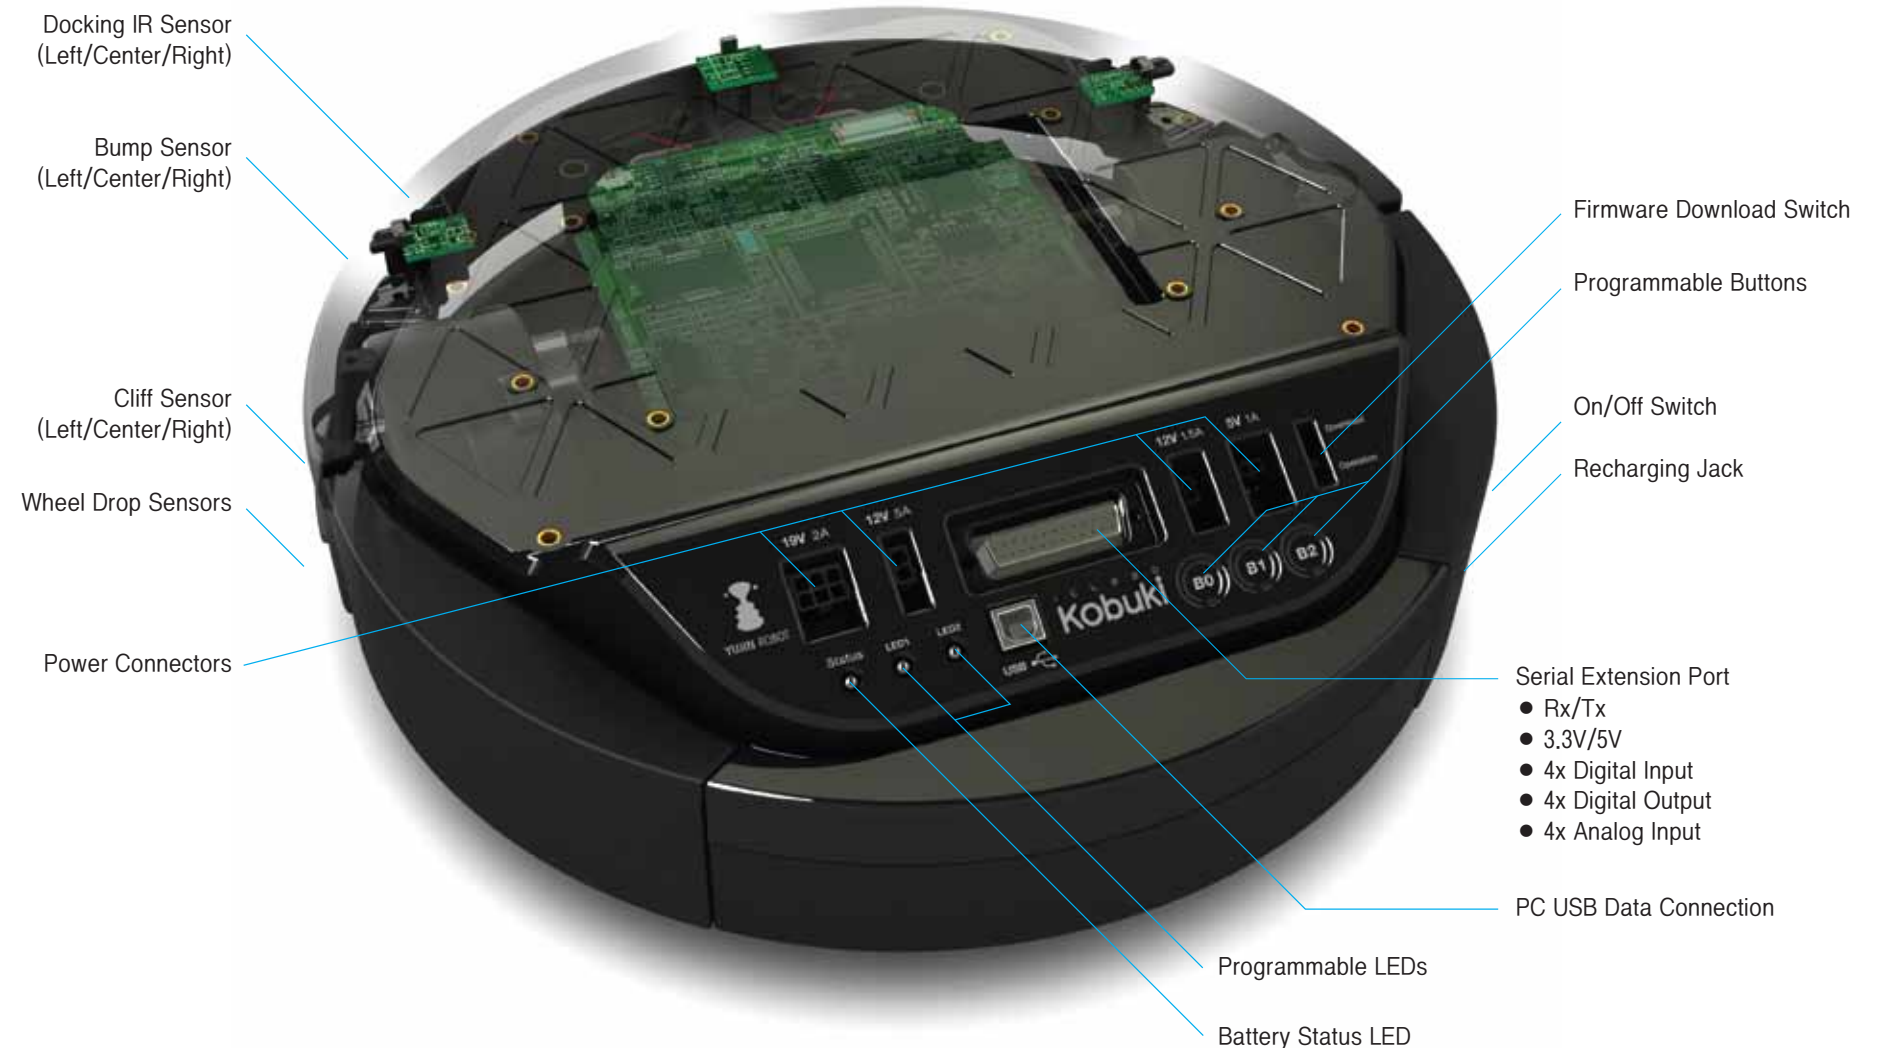

Kobuki is robotically engineered to be long-lived, tough and fast. With high performance batteries, Kobuki will tirelessly work alongside you through those long coffee-powered nights. He will happily burden himself with your modded array of sensors, actuators, laptops, embedded boards, portside cannons and do it all at a speed that makes his real world cousins seem like... well, turtles.

Use him for serving 치맥 (Chi-Mek), chasing your neighbour's kids, transport your cat... or simply, to make your own robot ideas become reality.

Kobuki is still young, don't expect him to remain as now. Kobuki's development has already been significantly influenced by the community and as he marches towards a venerable old age, we will continue to work with the community and you to ensure he becomes better with time.

We hope you enjoy working with Kobuki as much as we do.

Sensorly,
The Kobuki Team

CONTENTS

- 1 x Kobuki
- 1 x 4S1P Li-Ion Battery
- 1 x Charger
- 1 x USB Cable
- 1 x Power Cable
